Prerequisites LA 4/539 sequence or equivalent

Studio Description

As an extension of the 2020 Overlook Seminar - EXPERIMENT, this summer studio will develop a proposal for a Landscape Laboratory on the North Campus Riverfront. The landscape lab will be an extension of the Fuller Center and bring the award-winning model of the Overlook Field School to campus. With this space, students will be able to design, test, and install landscape installations at the lab and monitor their performance over time. Analogous to the Urban Farm, the Landscape Lab will provide an outdoor classroom for students to “learn through making” – but with a distinct focus on ecological and aesthetic education. Working together as a team, we will identify and design the requisite infrastructure to support these efforts .
